Implementing a Use Case from Top to Bottom

Mosh Hamedani

programmingwithmosh.com @moshhamedani

Core Use Cases

~~Add a gig~~

~~All upcoming gigs~~

Add a gig to calendar

Follow an artist

View gigs I'm attending

Who I'm following

Core
# Use Cases

~~Add a gig~~

~~All upcoming gigs~~

● **Add a gig to calendar**

Follow an artist

View gigs I'm attending
Who I'm following

Add a Gig to Calendar

Problem

Keeping track of the gigs the user might be attending
Do not model the universe!

My Story

Add a Gig to Calendar

User		Gig

Relational Model

Multiple Cascade Paths

API Contract

HTTP POST   **/api/attendances**

gigId

Summary

Steps

- Build a "simple" model

- Migrate the database

- Build an API

- Implement the view

Focus only one aspect at a time

- You'll be more productive

- You'll write better code

Exercise:
Implement Follow an Artist
